

## Planning Guide

Use the Graph paper to draw and help computer the size of the garage or building you need. Each square on the graph equals 1ft x 1ft. The items on the side have been drawn to the same scale as the graph paper, just cut out the items you will have in your garage to check the computation of your garage size, also there are probably items that you have that we have not drawn and listed, so please provide space for them. Be sure to maintain 2ft. minimum distance between vehicles & walls.

Built Right, Priced Right
